ARTIFICIAL INTELLIGENCE SNIPPETS

THE NEED FOR ARTIFICIAL INTELLIGENCE

Why do we even need artificial intelligence?
- **This question would have definitely arisen in your minds by now.**
- **Well, humans are a lazy species. We would love to live in a world where there is minimal human labor and thus we are able to save ample amounts of time.**

- Also, the data we are producing is in huge chunks. We as humans need something that processes and handles data to minimize the strenuous efforts being put into handling it.
- This processing and handling of data is called data science. Data Science, in simple words, is the scientific study of data, that stores, records and analyses data for our benefit.
